Hunting

From Page 1

While the 2014 average is still well below the 10-year average of 5.75, the 2014 counts were up in every one of the 13 areas of the main pheasant range of eastern and central South Dakota and some selected West River areas.

GFP ran the roadside counts daily July 25 through August 15 along 109 highway routes. The agency released the results Tuesday.

The 2014 count looks approximately like 2002. The hunters' harvest that season was estimated by GFP at more than 1.2 million roosters.

The estimated 2013 harvest was about 983,000. The last times the harvest fell below 1 million came in 1997

and 1992.

By contrast, the estimated harvest broke the 2 million mark for the only time in recent decades with more than 2.1 million taken in 2007.

There were 77,879 South Dakotans and 103,231 non-residents licensed to hunt pheasants during the 2007 season. License sales have gradually dropped since then.

The 2013 season saw just 57,677 South Dakotans and 74,424 non-residents licensed.

Last December, a pheasant summit was convened at the request of Gov. Dennis Daugaard.

He subsequently appointed a group to look at pheasant habitat issues.

The panel's final report is approximately 25 pages and is scheduled to become available to the public in early September, an aide said Tuesday.

Survey: Consumer Confidence Near A Seven-Year High

WASHINGTON (AP) — U.S. consumer confidence this month reached its highest point in nearly seven years, boosted by strong job gains.

The Conference Board said Tuesday that its confidence index rose for a fourth straight month to 92.4 from 90.3 in July. The August reading is the highest since October 2007, two months before the Great Recession officially began.

The optimism suggests that Americans will be more likely to spend in the months ahead, an important boost to the economy. Consumer spending drives about 70 percent of U.S. economic activity.

"The rise in confidence adds to other evidence that the U.S. economy is going from strength to strength,"

said Paul Dales, an economist at Capital Economics.

The survey found that Americans' outlook on the job market brightened considerably. The percentage of respondents who said jobs were "plentiful" rose to 18.2 percent from 15.6 percent in July. That's the highest level since 2008. Consumers' perceptions generally track the unemployment rate over time.

Steady and solid hiring this year has provided more Americans with paychecks to spend. Employers have added an average of 230,000 jobs a month this year, up from about 195,000 a month in 2013. Average monthly job gains since February have produced the best six-month stretch since 2006.

Global

nents of the climate system, increasing the likelihood of severe, pervasive and irreversible impacts for people and ecosystems," the report says. The final report will be issued after governments and scientists go over the draft line by line in an October conference in Copenhagen.

Depending on circumstances and values, "currently observed impacts might already be considered dangerous," the report says. It mentions extreme weather and rising sea levels, such as heat waves, flooding and droughts. It even raises, as an earlier report did, the idea that climate change will worsen violent conflicts and refugee problems and could hinder efforts to grow more food. And ocean acidification, which comes from the added carbon absorbed by oceans, will harm marine life, it says.

Without changes in greenhouse gas emissions, "climate change risks are likely to be high or very high by

the end of the 21st century," the report says.

In 2009, countries across the globe set a goal of limiting global warming to about another 2 degrees Fahrenheit above current levels. But the report says that it is looking more likely that the world will shoot past that point. Limiting warming to that much is possible but would require dramatic and immediate cuts in carbon dioxide pollution.

The report says if the world continues to spew greenhouse gases at its accelerating rate, it's likely that by mid-century temperatures will increase by about another 3.6 degrees Fahrenheit (2 degrees Celsius) compared to temperatures from 1986 to 2005. And by the end of the century, that scenario will bring temperatures that are about 6.7 degrees warmer (3.7 degrees Celsius).

"The report tells us once again what we know with a greater degree of certainty: that climate change is real, it is caused by us, and it is already causing substantial damage to us and our environment," Pennsylvania State University climate scientist Michael Mann wrote in

an email. "If there is one take home point of this report it is this: We have to act now."

John Christy of the University of Alabama, Huntsville, is in the tiny minority of scientists who are skeptical of mainstream science's claim that global warming is a major problem. He says people will do OK. "Humans are clever. We shall adapt to whatever happens."

While projections show that the world will warm and climate will change, there's still a level of uncertainty about how much, and that makes the problem all about how much risk we accept, said MIT climate scientist Kerry Emanuel.

If it's soon and only a little risk, he said, that's not too bad, but when you look at the risk curve the other end of it is "very frightening."

The report used the word risk 351 times in just 127 pages.

Jones

From Page 1

noted that Jones was always very dedicated to the job.

"I think Paula's legacy is devotion," Hunhoff said. "She was devoted to her job, devoted to her family and devoted to her friends."

He added that she was frequently one of the first to work and one of the last to leave.

"Weekends were for her family, but she worked long days during the week," he said. "And she rarely took time off. I can't remember the last time she took any kind of vacation."

Nathan Johnson, a former staff writer and city editor for the Press & Dakotan, spoke with Jones for many stories over the years.

Johnson said he remembered her personality the most.

"The many times I spent speaking with Paula, she was a very warm and inviting person," Johnson said. "She was quick to smile, and she loved to visit. Our conversations often began with a specific topic, but would inevitably branch out into

various subjects highlighted by her stories and laughter."

However, Johnson recalled one of the most poignant stories of Johnson's career came from before her tenure as auditor began when she was a part of a jury that handed out South Dakota's first death sentence in over 40 years.

"I remember, in particular, Paula's recollection of serving on the Yankton County jury (in 1992) that gave Donald Moeller the death sentence," he said. "The rape and murder of 9-year-old Rebecca O'Connell southeast of Sioux Falls haunted her, and she visited the locales where the crime occurred to get a better understanding of what happened. Even 20 years after the trial, Paula was very emotional about the case and could recount many details. It demonstrated a compassion that I consistently found rooted in her character."

Hunhoff pointed out that Jones was always very loyal both to colleagues and family.

"Paula would go out of her way to help people," he said. "She was very loyal to her friends and she loved to take the time to visit with her customers, even if it

meant she might have to work well past five to get caught up with her work. Above all else, Paula was deeply devoted to her family. Her husband, her children and grandchildren meant everything to her. They were the light of her life."

Jensen said Jones was also known to go out of her way helping employees with matters not related to work.

"If people would need help, she'd help them," he said. "If they had problems in their own life, she was kind of like a counselor. She'd always listen to you and try and help you out on certain things. She was always good to the employees."

Jones resigned the position of auditor last year due to health concerns.

"I fell out of touch with Paula after her resignation," Johnson said. "But I hope she ultimately found a peace befitting someone who brought so much good into the world."

Recycling

From Page 1

campus, digging in the dumpsters and collecting cans."

Wehri said that she decided to collect the cans to help fund maintenance of the campus' flower beds. She added that a small amount has also gone to helping pay for the monastery's past dog's food, treats and care.

"Every morning, afternoon and evening - three times a day - I go out and separate the bags, collecting cans," she said. "Maybe we don't collect as much during the summer, but definitely when school is in session."

Noting that in a typical month she will collect between 60-70 pounds of cans, Wehri said they collect enough to overflow the back of a pickup every month.

"Some of the kids-but not many - are good about separating out their cans and leaving them in bags next to the dumpsters," she said. "Not a lot of them do it though. I would say 75 percent of the cans collected, I have separated out of the trash."

The college hopes to help lower that number.

"We were looking for a way to be more environmentally friendly and at the same time we wanted to start a good recycling program at the college," said Greg Heine, the chief operations officer for MMC. "Sister Wehri has been the watch-dog for recycling on campus, sorting garbage to get the cans out. Now we hope we can help her out."

At Mount Marty College, a

plan will be implemented that not only focuses on the daily act of recycling, but will also include education outreach by Keep Yankton Beautiful.

"We will be working with work our work study program to help provide assistance to Sister Matthew with the collecting," Heine said. "The education aspect will be all student-driven."

In thanks for her years of service to the campus, Heine noted that the college had placed a label on each of the new bins that has a photo of Sister Matthew asking the students to help her recycle and keep the campus clean.

"It is just one way we can honor her for her years of service to the campus," he said. "She enjoys the landscaping and working with the flowers but would never take money to do it. By recycling she is able to fund the projects and every penny she had made recycling has gone back to the campus."

Wehri said she knows that the students sometimes look at her funny when she is digging in the garbage, but that she hopes they understand why she is doing it and, in the future, will help by recycling their cans into the appropriate bins.

"Almost all of the bins have been installed before the students returned this week," Heine said. "With the education that is planned because of this award, and the ongoing awareness this will create we are optimistic our efforts to increase recycling campus-wide will be successful."
