# **Predator Calling A Fun Sport**

#### BY GARY HOWEY

Hartington, Neb.

In our area and throughout the upper Midwest, the predator population has skyrocketed. The coyote, fox, raccoon and skunk population seems to have increased greatly over the last several years. This increase has caused problems for both domesticated animals and wild game.

Domesticated animals such as chickens, ducks, cats and small dogs rank high on the coyote and fox menu, as do wild animals such as pheasants, quail and rabbits.

When the pheasants are nesting,

predators such as raccoons and skunks are out looking for the nests while the larger predators, coyote and fox are

raising their young, when they need addi-

tional food to feed the extra mouths.

With the limited habitat in the upper Midwest, the predators do not need to look far for a meal. Our limited habitat, the few fence lines that are left, road ditches that are not baled up, creeks and shelterbelts that are not grazed and along the edges of alfalfa fields make it easy for the predators to locate the nesting birds.

With their acute sense of smell, it is not hard for them to locate the nests and destroy the eggs or the hens.

It looks like the high fur prices of last year are around again this year

Over the last few years, hunters and trappers were able to put a dent in the predator population as fur prices were on the rise.

Once the weather turns cold, coons and other furbearers will hole up, causing many trappers and hunters to call it quits.

Once there is less activity out there from coon hunters and coyote chaser, is when I like to head out predator calling.

Once it gets cold and we have snow on the ground, predator calling can be very productive!

During cold weather, preda-

I found it hard to believe that an animal as smart and cunning as a coyote or fox, equipped with super hearing and an acute sense of smell would come running into a hunter that is making a noise sounding much like a crying baby.

The idea behind predator calling is to sound like an easy meal to the predators. The cry of a wounded animal is a sound predators became familiar with at an early age and generally is the way to an easy meal.

I have called predators both day and night and have found both to be an exciting experience.

You can call predators all year long, but the best calling in the upper Midwest happens when it is cold with snow on the ground.

When the grounds covered with snow, the coyote needs to look farther and hunt harder for his next meal. The snow on the ground allows the hunter to spot them much easier.

Because of the coyote's, keen sense of smell, callers, hunt with the wind in their face, making it harder for them to detect you.

If a coyote or other predator is the least bit suspicious, they will circle around and use the wind to their advantage.

This is why I use Hunter's Specialties Cedar Scent Wafers. By clipping them on your clothing, cap or hanging from a branch, it will help cover the human scent.

In my area, Cedar County, there are numerous cedar trees, with scent of cedar a natural scent and does not alarm predators.

Predators have excellent eyesight with the ability to detect movement at great distances. By using some sort of decoy, the coyote will focus its attention on it and not the location the call is coming from. The decoy movement attracts the coyote where he is not looking directly at the caller, giving the hunter a chance to get into shooting position.

I use the Advanced Decoy Research Mini Supreme Extreme Decoy, which resembles a squirrel that allows me to choose the amount of movement to use. I can choose from a quick panic movement to a slower random movement.

The choice of weapons is up to the individual, depending where you are hunting if you are calling during the night or during the day.

During the day, I use a 243 scope and a 40 or 55-gr. bullet. Other rifles such as the 22-250 and the 223 also work well. When hunting at night, I prefer a full moon with snow cover, allowing me to spot the coyotes coming into the call. Since the shots you get at night are much closer, I use a 12-gauge shotgun loaded with number four buckshot for close shots and my 22-250 for

tions to:

A bobcat called in is pictured during a hunt on the Rosebud Reservation in South Dakota. It was called in two days after the bobcat season had closed.

The first calls should not be

too loud as they may spook a

covote close by. If I don't see

any movement after a few min-

utes, I follow it up with four or

five shorter but louder calls.

It's a good idea to glass the

area with your binoculars

while you wait before calling

again. If nothing shows, re-

sume your calling. Coyotes

prefer to stay in the cover

proach; every so often, I will

using it to cover their ap-

out medium volume call.

longer shots.

When hunting in snow cover, I wear snow camo, or something white, if you do not have snow camo, a white sheet pulled over you will help blend the caller into the terrain.

There are numerous predator calls on the market and I use both mouth and electronic calls.

One of our team members has started using a call designed by Dakota Yote Varmint Calls out of Rapid City. They have five calls available that will work in any calling situation. Their calls are easy to use, with great sound, range and do not freeze up in cold weather. More information on their calls is found at

http://dakotayote.com/ I also use electronic calls and find the ICOtec Digital electronic calls are a good bet. a dying rabbit call, generally case one is coming in that I beginning with a long drawn may have not seen.

When I spot a coyote coming in or one that is hesitant, I will go to my howler/yipper and howl at him. Many times, this will cause them to run in thinking another coyote is about to beat them to a meal.

PHOTO: LARRY MYHRE

I spend about 30 minutes in each spot. Before getting up to leave, once again, I'll glass the area one more time as covotes are sneaky critters and can slip in without being detected. This final glassing makes sure I didn't miss anything. Most shots during the daylight can be one hundred to one hundred fifty yards, with shots in the night much closer, less than thirty yards.

During the evening when I call, I set back to back with another hunter so the coyote will not come in behind us; I also use a predator light on my rifle with a red lens, while other hunters go with the green lens, as these colors seem to be hard for predators to see at night.

The first time I hunted at night was a bit spooky as the thought of a bunch of angry coyotes closing in on me had me a bit apprehensive.

When calling at night I prefer to use my howler/yelper call. If another coyote hears howling in his territory, he gets upset. Howling is one way a coyote lets other coyotes know this is their territory. When you get a family group or pack riled up, the hunting can be fast and furious.

You may get the whole pack coming in with the hair on the back of their necks standing up, growling, snarling and ready for a fight. We have had as many a six coyotes come running in at night and they were mad.

Predator hunting is a great sport and by decreasing their numbers, you're helping to ensure that a few more pheasants might make it to next season.

Give predator hunting a shot, it is a howl!

Gary Howey, Hartington, Neb., is a former tournament angler, fishing and hunting guide. He is the Producer/Host of the award winning Outdoorsmen Adventures television series, seen on Fox affiliates throughout the upper Midwest. In the Yankton area it is seen on local channels 2 & 98 Saturday at 6:30 pm and Sunday at 7:00 am. It is also available on KTTW/KTTM-TV (Fox) Sioux Falls/Huron, S.D. Saturdays at 7:00 am as well as on MIDCO Sports Network Thursday at 5:30 pm and Sunday at 10:00 am. He and Simon Fuller are the hosts of the Outdoor Adventures radio program Monday-Saturday at 6:45 am on Classic Hits 106.3 and ESPN Sports Radio 1570. If you are looking for more outdoor information, check out www.outdoorsmenadventures.c om.

tors need more lood to keep warm and the snow on the ground; it is harder for them to locate food.

Calling predators can be a great sport, giving shooters the opportunity to get outdoors when no other outdoor shooting sports are available.

It is one of those things you need to experience. in order to believe it. I know I was skeptical when I first heard about it.

They are easy to use, run by remote and have worked well for me over the years. They have numerous calls

that when used either by themselves or together will bring in most covotes, including the dying cottontail/jackrabbit call, the howler/yipper and the squeaker. Check out their products at www.icotec.com During the day, I start with

## Center for Active Learners

Spring 2014 Session 1 begins February 4!

Enriching the lives of those who wish to indulge in learning for its own sake.

Center for Active Learners is a program that provides short educational seminars covering a broad spectrum of topics for adult learners. These non-credit courses (no requirements, no tests!) are available to anyone of any age or background.

Courses are open to both members (\$50/ course) and non-members (\$75/course). Become a member for \$25.00 a year and have first chance at registration, a discount on the courses, and the opportunity to bring a friend to a session.

Visit us online at WWW.MTMC.EDU/BENEDICTINEINSTITUTE to learn more.

Informational Open House: SUNDAY, JANUARY 19 AT 2:30 PM | CYBER CAFÉ, MMC CAMPUS MEET THE INSTRUCTORS AND HEAR MORE ABOUT THE TOPICS!

#### **Funding Available For** S.D. Trails

PIERRE — South Dakota State Parks Director Doug Hofer announced today that applications are being accepted for grants from the Recreation Trails Program (RTP). The grants will be available for trail projects sponsored by municipalities, counties, state parks, federal land management agencies or tribal governments.

"When it comes to promoting healthy communities, recreational trails are key," Hofer said. "As safe corridors for exercise and recreation, trails give families the opportunity to spend quality time together and enjoy the natural beauty of our state."

The Recreational Trails Program provides partial reimbursement for approved trail projects. Eligible projects include construction of new public trails, rehabilitation of existing public trails, development of trail-related facilities and educational programs that relate to recreational trails

The application deadline is Friday, April 11, 2014.

RTP funds come to the state through the Federal Highway Administration and are apportioned to states by Congress to fund both motorized and non-motorized public recreation trail projects. The amount of funds available is based upon the number of recreational vehicles licensed in each state.

Application packets are available online at the Game, Fish and Parks website. For more information, contact Grants Coordinator Randy Kittle at 605.773.5490 or by e-mail at randy.kittle@state.sd.us

#### Commission Meeting **To Discuss Elk Permits**

LINCOLN, Neb. - The Nebraska Game and Parks Commissioners will consider a bonus point system for general bull elk permits when they meet Jan. 17 in Lincoln

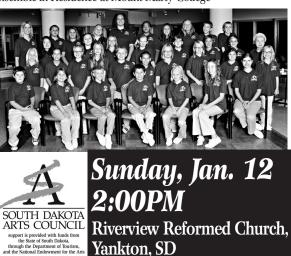

If passed, the system would give people who have applied for a bull elk permit and been unsuccessful one or more years a better chance of drawing a permit. Beginning in 2014, a person would receive a bonus point each time he or she applies for but does not receive a permit. In subsequent years, applicants would get an additional entry into the draw for each bonus point accrued. Landowner permits would be excluded from this system. ing zones and conservation orders for The meeting is at 8 a.m. in the thirdcoots, ducks, deese and crow: floor conference room of Game and Parks -- amend camping and rental fees at headquarters, 2200 N, 33rd St.
