

What Women Need to Know.

Women's Health Care Trends

Trend: The greatest step in improved hearing is recognizing you are having a problem. And women are amazingly self-aware. A much higher percentage of women will be treated for hearing aids this year – but NOT because they have more hearing problems. Women are simply more likely to act on them. In contrast, men may admit to hearing problems, but are usually the last to act on them. When women DO act, they wished they pursued them sooner. Why? An immediate feeling of being more connected to friends and family.

Clinic Facts: Women tell us their hearing aids are so comfortable that they hardly realize they are in their ears and are surprised by how much they were missing, and how easy it was to make the transition. Most female patients choose discreet, mid-level, digital open-fit hearing aids. They are comfortable, convenient and half the price of high-end hearing aids. It's a fact; women act. So don't wait another day to hear better!
